## ERCON BRINGS IN NEW PRODUCTS FOR AIRPORTS

ERCON COMPOSITES, has been pursuing with its R & D and has got many new products in its basket. It has now become the first Indian company to come up with frangible lighting masts, wind masts, lighting poles, distance to go markers, taxi way signs etc. for airports. Ercon is the first company to achieve this and has all the necessary approvals

for the same. Its products have been tested by the Airports Authority of India (AAI) and are installed at various airports in India and Nepal. Ercon is now one of the few companies around the globe to have such capability. The R & D team of Ercon headed by the Technical Director Mr. Mukesh Maheshwari

has been able to achieve the feat in a very short span.

We congratulate the R&D team for its dedication and time bound deliveries of the new products.
