E-SAFE ERCON

ELECTRICALLY SAFE

LADDERS, HOT STICKS & DISCHARGE RODS

E-Safe is committed to provide safety equipments for industrial use.

YOUR SAFETY IS OUR CONCERN.

Safety Items

Single & Extension Wall Support Ladders

E-Safe has different type of wall support ladders. Ladders that are single and ladders that are extendable. These ladders come with swivel shoes to give firm base to the ladders.

A-Type & Platform Ladders

The A-Type ladders are the self standing ladders. These come in different types, ones with both side steps or one side steps. The platform ladders are the ones with the extended ladder side rails to give additional support when standing on the top of the ladder.

Discharge Rods & Tree Pruners

These are safety equipments for working on or near high tension lines. Tested for high resistance to high voltage these are extendable. Whereas discharge rods and hot sticks are used for the maintenance of high tension lines, Tree pruners are used for cutting tree branches near high tension lines.

DEVELOP SAFETY AS A HABIT

E Safe Enterprises, an ERCON group company is engaged in the manufacturing of industrial safety equipments, specially for the electrical safety. These products include safety ladders, hot sticks and discharge rods, etc. made from ERCON Pultruded profiles which are the bench mark of quality in the FRP field.

E-Safe safety ladders are designed looking into needs of the end user for safety & ease in handling These are robust and tested as per the international standards, thus ensuring quality. E-

Safe has developed full FRP ladders for adding additional flavor of safety.

E-safe offers a gamut of ladders - like single wall support type ladders, extension ladders, A-Type ladders, A-Type Ladders with supports for standing on the top, Platform ladders, Trolley Type Ladders, Tower Ladders etc.

E-Safe also makes Discharge Rods, hot sticks & De-energizer Sticks for maintenance of high tension lines. Extendable to desired lengths, High insulation, light weight, high strength and low water absorption make these equipments very handy for use immediately after rains also.

“All We Talk about is Your Safety”

Tree Pruners have been developed with FRP extendable tubes for giving high insulation for cutting trees near high tension lines. The extendable system helps in cutting most of the branches from the ground itself. Thus a person is saved from climbing the trees and also helps in reaching areas which are difficult to reach normally.

E-Safe is continuously working on the improvement of its product range and has evolved its products to international standards.

Under the able leadership of Mr. Manish Maheshwari, CEO of the firm, it has taken big leaps in quality of products as well as development of new products. The dedicated efforts of the whole team has helped E-Safe come a long way.

E-Safe has now come up with the new range of house-hold ladders. Safety is not just a concern of our industries, running a house-hold is not less than running an industry, and safety of the the house lady, the servants and the aged at home is equally important.

E-Safe products are now being exported to middle east and other countries in the Asian and African continents.

Trolley & Tower Ladders

Trolley ladders are ladders with wheel and have platform. Tower ladders are for reaching very high places like high mast lights etc. These are the tailor made ladders and are extendable. These have a platform, and are mounted on trolley. These are tiltable ladders for easy maneuverability.

“Team work and dedication can do wonders. That’s my recipe for success.”

Manish Maheshwari
CEO
E-Safe Enterprises

SAFETY FIRST

“Before taking risk, see what is at stake.”
